The invention relates to prostate specific proteins (PSP) and prostate specific nucleic acids (PSNA). Sequences of the invention are useful for identifying, diagnosing, monitoring, staying, imaging and treating prostate cancer and non-cancerous disease states in prostate. They are also useful for producing engineered prostate tissue for treatment and research. The PSNA sequences are used in gene therapy and for producing transgenic animals and cells. The invention is also used as vaccines. The present sequence is human prostate specific protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                              WO200224718-A1

The polypeptides of the invention are useful for producing antibodies that are useful for screening cDNA expression libraries to isolate full length clones of interest. The antibodies are also useful for detecting the polypeptides in situ, in cells or in vitro, in cell extracts. Nucleic acid molecules of the invention are useful for producing transgenic plants with altered tolerance to heavy metals. They are also useful as probes for genetically and physically mapping the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          뫄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ID
                                    The invention relates to heavy metal (e.g. arsenite and zinc) transporter polypeptides and polynuclectides. The polypeptides of the invention are useful for producing antibodies that are useful for screening cDNA expression libraries to isolate full length clones of interest. The antibodies are also useful for detecting the polypeptides in situ, in cells or in vitro, in cell extracts. Nucleic acid molecules of the invention are useful for producing transgenic plants with altered tolerance to heavy metals. They are also useful as probes for genetically and physically mapping the genes that are a part of, and as markers for traits linked to those

                                                                                                                                                                                                                                                                  The invention relates to heavy metal (e.g. arsenite and zinc) transporter polypeptides and polynucleotides. The polypeptides of the invention are useful for producing antibodies that are useful for screening cDNA expression libraries to isolate full length clones of interest. The antibodies are also useful for detecting the polypeptides in situ, in cells or in vitro, in cell extracts. Nucleic acid molecules of the invention are useful for producing transgenic plants with altered tolerance to heavy metals. They are also useful as probes for genetically and physically mapping the genes that are a part of, and as markers for traits linked to thos genes. The present sequence is soybean zinc transporter (ZnT-2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New arsenic transporter polypeptides and producing transgenic plants with altered

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      capable of detecting 1000 or more genes from Drosophila. The inventuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence data for this patent did not form specification, but was obtained in electronic (

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc disorder characterised by aberrant activity of 47476, 67210, 49875, cc 46842, 33201, 83378, 84233, 64708, 85041 or 84234-expressing cell in a cc subject. The protein molecules can act as novel diagnostic targets and ct therapeutic agents for controlling aberrant or deficient signal cc transduction resulting, in e.g., haematopoeitic disorders, including cc transduction resulting, in e.g., haematopoeitic disorders, including cc an inability to clear infections (e.g., viral or bacterial infections), cc as well as disorders related to abnormal cellular proliferation or cc differentiation, e.g., leukaemia. They may also be used to control cc disorders of metabolic imbalance (e.g., disorders of lipopolysaccharide biosynthesis or glycogen synthesis) immunological disorders, cell cardiovascular disorders, neurological disorders, or cellular cc motility and adhesion disorders differentiation disorders, e.g., cancer, cell disorders, viral diseases, neurological disorders, red blood coll disorders, disorders of the small intestine, disorders, kidney combalance, protein trafficking disorders and disorders associated with consumptions. The sequences of the invention are also useful for consumptions assays, predictive medicine (e.g., diagnostic assays, cc present sequence represents a predicted consensus sequence motif cc present sequence represents a predicted consensus sequence motif cc found in the protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

cc differentiation, e.g., leukaemia. They may also be used to control cc disorders of metabolic imbalance (e.g., disorders of lipopolysaccharide cc biosynthesis or glycogen synthesis) immunological disorders, control cardiovascular disorders, neurological disorders, cell crolliferation and/or differentiation disorders, e.g., cancer, cell controllity and adhesion disorders differentiative disorders, red blood cc cell disorders, viral diseases, neurological disorders, red blood cc disorders, viral diseases, neurological disorders, kidney controlled disorders, pain or metabolic disorders, liver disorders, kidney considers, disorders of the small intestine, disorders of metal in the invention are also useful for screening assays, predictive medicine (e.g., diagnostic assays, controlled trials, and pharmacogenetics); cand methods of treatment (e.g., therapeutic and prophylactic). The cc present sequence represents a predicted consensus sequence motif cc found in the protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated 47476, 67210, 49875, 46842, 33201, 83378, 84233, 64708, 8 or 84234 polypeptides, useful as reagents or targets for treating diagnosing pain or metabolic, liver, kidney, or cardiovascular disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to the DNA and protein sequences of novel isolated 47476, 67210, 49875, 46842, 33201, 8378, 84233, 64708, 85041 or 84234 proteins. The method of the invention is useful for treating a disorder characterised by aberrant activity of 47476, 67210, 49875, 46842, 33201, 8378, 84233, 64708, 85041 or 84234-expressing cell in a subject. The protein molecules can act as novel diagnostic targets and therapeutic agents for controlling aberrant or deficient signal transfer to the controlling aberrance transfer to the controlling aberrant or deficient signal transfer to the controlling aberrance transfer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14-NOV-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             õ
                  This invention relates to the DNA and protein sequences of novel consisted 47476, 67210, 49875, 46842, 33201, 8378, 84233, 64708, 85041 CC isolated 47476, 67210, 49875, 46842, 33201, 8378, 84233, 64708, 85041 CC or 84234 proteins. The method of the invention is useful for treating a CC disorder characterised by aberrant activity of 47476, 67210, 49875, CC 46842, 33201, 83378, 84233, 64708, 85041 or 84234-expressing cell in a CC subject. The protein molecules can act as novel diagnostic targets and CC therapeutic agents for controlling aberrant or deficient signal CC transduction resulting, in e.g., haematopoeitic disorders, including CC blood clotting disorders, autoimmune disorders, or disorders related to CC an inability to clear infections (e.g., viral or bacterial infections), CC differentiation, e.g., leukaemia. They may also be used to control CC disorders of metabolic imbalance (e.g., disorders of lipopolysaccharide CC biosynthesis or glycogen synthesis) immunological disorders, carlot cardiovascular disorders, neurological disorders, or carlot cardiovascular disorders, neurological disorders, or carlot cardiovascular disorders, or carlot cardiovascular disorders, or cardiovascul
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   14-NOV-2000;

The present invention relates to the genome sequence of Listeria CC monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of ct it are useful for selecting probes and primers for detecting genes in L. CC monocytogenes and related organisms, and for studying genetic ct polymorphisms and other genomes. The present sequence is a protein cenceded by the genome sequence of the present invention. Proteins ct expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and cfor biosynthesis and biodegradation, especially biosynthesis of vitamin cc selecting compounds that regulate gene expression and cell replication cand modulate L. monocytogenes related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and compounds that regulated diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and compositions for the treatment or prevention of infections by L.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Maduenio
Rose M,
                               monocytogenes and related organisms.
Note: The sequence data for this patent did not form specification, but was obtained in electronic format at ftp.wipo.int/pub/published_pct_sequences.

The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  14-AUG-1997;

The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life
                                                                                                                                                                                                                                                                                                                                                                                                                                       cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14-AUG-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLO1840-ABL16175) and the encoded proteins (ABLO1840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           capable of detecting 1000 or more genes from Drosophila. The inventuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ABB66435
                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 26097; 21pp + Sequence Listing; English

The recombinant yeast containing the OSR DNA sequence was us in the preparation of glutathione by peroxide resistant microbes. Glutathione produced by the recombinants is secreted in to the culture medium and collected. It is useful in drugs and foodstuffs
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Prodn. of glutathione using peroxidase resistant yeast - useful in the manufacture of drugs and foodstuffs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 1996-203162/21.

                                                                                                                                                                                                                                        sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nakagawa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAF67743 to AAF68080 encode the Corynebacterium glutamicum membrane construction and membrane transport (MCT) proteins given in AAB76510 to AAB76847. The MCT nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria (e.g. Brevibacterium lactofermentum), the typing or identification of C. glutamicum or related bacteria, as reference points for mapping C. glutamicum genome, and as markers for transformation. AAF68082 and AAF68082 represent sequencing primers which are used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Corynebacterium glutamicum nucleic acids encoding membrane construction and membrane transport proteins or their portions, useful for typing or identifying C. glutamicum or related bacteria, and as markers for transformation -

The protein is similar to zinc transporter and vesicular transporter proteins. The transporter proteins and their polynucleotides, as well as antibodies specific for the proteins may be used for the detection of mutant proteins or inappropriately expressed proteins for the diagnosis of disease. In addition they may be used to screen for drugs and as
